ROWING PLANTS is more than a business at our nurseries. Each plant listed in the following pages is grown in our own nurseries at Weston (with the exception of the hybrid roses and some fruits).

Our greatest pride lies in the fact that we raise this large variety of plants under more difficult and trying conditions than exist in other parts of our country. We do this because we wish to sell acclimatized material that is grown close to the home owner.

Plants in themselves can survive a great deal of mistreatment, but will not recover quickly from the shock of transplanting if they are grown in milder climates or if they are left out of the ground for any length of time. After transplanting, a plant is susceptible to many prey, and unless it can come back soon, it becomes a burden and a hardship to the owner who expected pleasure from it when it was purchased.

Because we are keenly interested in *everything* that grows is an additional reason why we grow this great variety of plants. We love plants and are forever on the lookout for new and more beautiful varieties.

The tremendous increase in demand for locally-grown plants has caused our nursery to continually expand its acreage. In 1944 we purchased 375 acres of land in Hopkinton, and since then have added even more for the sole purpose of growing plants. This land is situated in rolling country and some of it is 500 feet above sea level. Because of the rough and rocky terrain, much of the land is impossible to cultivate. The Department of Soil Conservation for Middlesex County is cooperating with us for the purpose of controlling soil erosion. Every field is planted on the contour and excess water is carried off by terraces and diversion ditches, some into irrigation ponds. The result of this tremendous undertaking has already been proven in the growth of our plants during the first

two drought years. About 75 acres are already planted in this

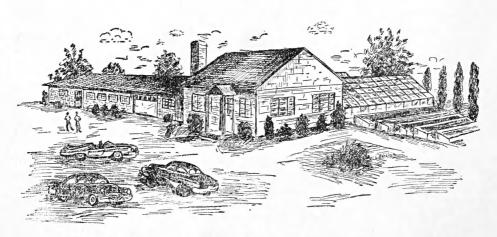

interesting manner.

In addition to the planting and land development, we are operating three propagation greenhouses that were recently built along with an office and workshop. Mr. and Mrs. Peter Mezitt, and Mr. and Mrs. Edmund Mezitt and family, now live in homes recently built on "the hill."

Many of the plants you order are now grown in Hopkinton. Dogwood, azaleas, yews, rhododendrons, and mountain laurel are raised on these hillsides and are a memorable sight when in bloom. Many of our customers have visited this Hopkinton nursery and they are thrilled with both the plants and the distant views from the hilltop. Unfortunately, we cannot yet fill all orders for plants from the Hopkinton nurseries, and so we do not maintain a sales force there. We do have a salesman on hand, however, and you may select your specimen plants if you so desire.

Imagine a field of ten thousand laurel in bloom, or a similar field of azaleas, rhododendron, or dogwood — all against a setting of distant towns and hillsides. Come out for a visit at flowering

time and your trip will be well rewarded.

Office, Greenhouses and Sales Yard, Hopkinton

#### Evergreens

Few, if any, plantings are effective without the use of evergreen trees or shrubs. Their presence reinforces the entire planting in the esthetic sense, and without evergreens the effect desired in a land-

scape grouping is lost.

As backgrounds and windbreaks they have no equal. Every planting needs the weight and stability of an evergreen to contrast and shield the more dainty and picturesque flowering trees, shrubs, and perennials.

HE demand for the broad-leaved evergreens is increasing each year. Here is one class of plants that rises above all the others in the aristocratic sense. The marvelous foliage and flowers of our broad-leaved evergreens and the ability of these plants to flourish in New England make them the most preferred items in the plans of well-designed home gardens. Some of the broad-leaved evergreens are slightly more expensive because they are slower-growing during the early stages, but an investment in a broad-leaved evergreen is one that guarantees many years of gardening pleasure.

Since climatic conditions in New England are ideal for plants in this group, we highly recommend them for all conditions where shade predominates as well as in full sunlight. Profusion of flower color may be realized from early spring until late June by combining Rhododendron varieties with Japanese Andromeda, Mountain Andromeda, Drooping Leucothoe and Mountain Laurel. And for foliage contrast and along foundation walls where building lines are ugly, interplant with spreading Yews and Junipers. Our selection of broad-leaved evergreens represents a large percentage of the Hopkinton nursery and it is our belief that these plants are the finest to be had.

# Deciduous Shade and Ornamental Trees

We grow a large number of shade and ornamental trees, as indicated by the following pages.

Good root systems and healthy well-pruned tops combine to make our trees desirable for ease in transplanting and after care.

Of particular interest to the small home-owner should be the flowering trees that require little care, and offer flowers, fruit, beautiful foliage and shade. We recommend Dogwoods, Magnolias, Flowering Crabs and Cherries as being particularly useful and ornamental on the small home grounds.

#### Flowering Crabapples

Enthusiasm is difficult to restrain when Crabapples are in bloom. The dainty pastel shading of the airy flowers, the brilliant coloring of the fruits, the intricate cross-branching habits, all serve to set them apart as worthy of a place in almost every planting. Many make fine jellies, and many provide food for the birds.

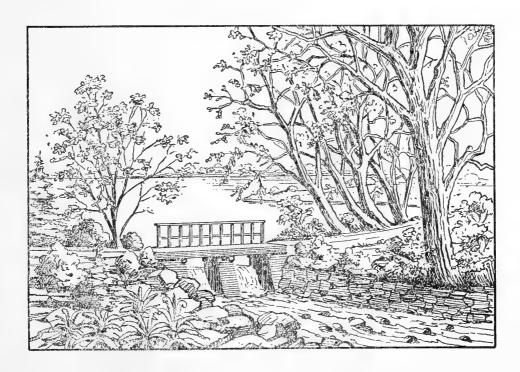

We grow our Crabapples both for specimen plants and for screening purposes, the latter being low-branched and in shrub form.

### Hardy Ornamental Shrubs

It is interesting to note that many of the common shrubs in our everyday landscape are available to us because of the exacting efforts of early plant-hunting expeditions to distant corners of the world.

The growth of horticultural interest in America has necessitated broader cultivation of plant varieties and the development of new forms. The following listed plants are representative of the entire ornamental shrub group and individually have their place as specimens or as a part of the flowering shrub border. You will find them hardy and readily adjustable to your garden or home landscape and a never-ending source of pleasure in flower color and ornamental fruits.

# Vines and Climbing Plants

The average garden is seldom complete if it lacks the finishing touch of a vine to soften an unsightly arborway or fence corner. Nothing in the plant realm provides a more rapid cover for harsh stone or brick walls, and the combination of flower, fruit and ornamental fall foliage compels their use somewhere in the landscape theme.

# Perennials and Rock Garden Plants

During the past twenty-five years we have given particular attention to the growing of hardy perennials, and during these years we have tried and tested hundreds of varieties, both old and new. We have found that the plants in the following list are best suited for our New England gardens.

Our perennial gardens are adjacent to the office and parking area, and our customers take great delight in periodic visits to the nursery throughout the growing season to view the succession of blooms. A large number, in this way, discover their preferences and personally select their plants.

Our plants are field-grown, and consequently have vigorous root systems, which assure successful transplanting.

The plants are 50c. each, 3 of one variety \$1.35, 10 of one variety \$3.50, unless otherwise marked. 5 or more of one variety may be purchased at the 10 rate.

The asterisk (\*) indicates varieties particularly well adapted for the Rock Garden.

The ultimate height of the plant is given in feet and inches.

The approximate time of flowering is given in months.

### Hardy Chrysanthemums

We believe the chrysanthemum offers to home gardens more real flower value than any other plant.

We recommend planting chrysanthemums during the early part of the summer, rather than waiting until they are in bloom. The plants develop and flower better if they are planted before the flower buds develop, and they become better established to survive the winter. (However, chrysanthemums may be planted successfully even when in full bloom.) Once in the garden proper they can be pinched back, staked, fertilized and watered, to suit the garden in which they will display their beauty during the long autumn season.

# Conditions of Sale

It is to our own interest to see that only good and correctly labeled plants leave the Nursery, but we give no guaranty, express or implied, as to description, growth and success of any stock we sell, for it depends on correct planting, proper soil, weather conditions, and the general care of the plants.

We accept all orders upon the condition that they shall be void should injury befall the stock from frost, fire, hailstorm, or other causes over which we have no control.

Any errors made by us will be gladly rectified if notice is given within ten days after receiving the stock. If any plants are found to be misnamed, we will replace them the next planting season.

We sell five plants of the same variety at the rate of ten.

All parcel post, express or freight charges are paid by the purchaser. On orders packed for shipment there is a small additional charge for packing, at cost. (See order blank—page 67.)

Prices are subject to change without notice.

We reserve the right to make an additional charge for specimen plants selected in the field.

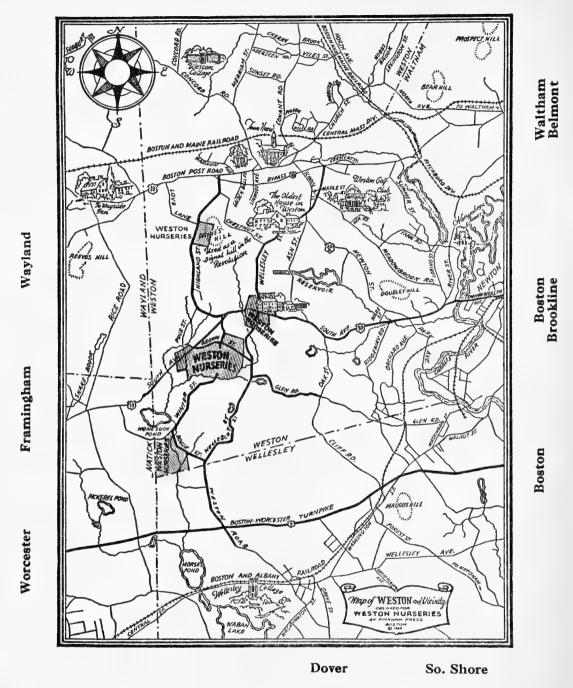

A certificate of State and Federal inspection for freedom from injurious insects (gypsy moths, Japanese beetles, etc.) or disease on our plants is available with every order.
